

ABSTRACT

It is intended to standardize MCAO model and to further improve the reproducibility and reliability thereof.

5 There is provided a probe holding device (10) which includes a probe holding member (14) for holding a blood flowmeter probe (12), and such device is used together with the blood flowmeter probe when measuring intracerebral blood flow. While holding the blood flowmeter, the probe
10 holding member can be disposed in a position of being adjacent to and outside temporal bones.
